We look in high places to solve your storage space problems!

- A platform floor is the most efficient and inexpensive way to expand your existing storage space or floor surface.
- Our platform floors enable you to use every inch of valuable industrial space you have not been able to use before.
- In most instances the cost of a platform floor is a fraction of the other available options, such as rebuilding, relocating and hiring extra space.
- Our platform floors are a flexible system that guarantees a safe and complete division of space based on your specific requirements, and suitable for almost every type of storage and activity.

The X-Steel software system developed by Mostoles Systems' own design department, and its extensive assortment of 35 different types of steel sections provide you with perfect, tailor-made solutions to realize your specific wishes. The cold-rolled steel sections used for the beams vary between heights of 180 and 460 mm, with material thicknesses of 2 to 4 mm. We supply a number of different sections, including C and Sigma sections. All our constructions are in full compliance with the legal standards of the Building Materials Decree and are calculated based on a standard safety quotient of 1.5.

The columns are manufactured from certified, high-quality steel and finished with a standard coating available in the two RAL colours. Deviating colours are generally also available subject to consultation. The main and bridging beams are produced from perforated *Senzimir* galvanized steel sections.

All connections are firmly bolted together.

The timber floor panels are generally 38 mm thick and the lower surface is treated with a white, reflective melamine covering surface.

The upper surfaces of the floor panels are treated with an additional anti-wear compression sealant in a standard natural finish.

The staggered tongue and groove seams between the floor panels are designed to create a perfectly closed and level floor surface.

CHOOSE MOSTOLES PLATFORM FLOORS FOR THE MOST EFFICIENT USE OF YOUR EXISTING WAREHOUSE STORAGE SPACE.

OUR PRINCIPAL ARGUMENTS:

- Free-standing and easy to assemble
- Competitive pricing and value adding
- Easy to relocate, expand and modify
- Available in RAL colours
- All vulnerable wooden edges are finished with corner sections
- Lead-through systems available for SPRINKLER and other systems throughout all beams
- Full compliance with the Building Materials Decree
- Five-year guarantee on design, material and finish

ACCESSORIES AND OPTIONS

- Steel stairs supplied with hardwood steps or galvanized grid steps
- Aluminium emergency ladder for cages
- Steel handrail construction with steel kickrails and steel or hardwood rail sections
- Steel smoke screen
- Pallet loading section with safe tipping gate, sliding gate, lift gate and chain gate system

M OSTOLES platform floors form the foundation of the most diverse and efficient warehouse design system.

One of the best-known applications is the system designed for the clothing sector. We are always open to designing and realizing efficient, cost-saving systems for the storage and internal transport of hanging clothing. The FORMOVE rail system, designed by MOSTOLES INDUSTRIAL SA Madrid, is used worldwide and warrants perfect solutions and durable systems.

Would you like to know more?

MOSTOLES SYSTEMEN BV will provide you with an expert analysis, and recommend a customized solution for the most efficient design of your existing warehouse space. Our recommendation is generally free of charge!
